

Before You Start (Seasonal Snowfall)

What are Seasonal Snowfall Contracts?	Seasonal Aggregate Snowfall Index ("SASI") Contracts are a unique way to receive a payment when the location of your choice gets no Snowfall or gets Snowfall in excess of a predetermined amount during the winter season, defined as Sept 1 st through May 31 st .
Who should buy Snowfall Contracts?	You should consider buying a Snowfall Contract if you have an opinion on how much Snow a particular city is going to get during the whole winter.
Are contracts insurance?	No. Insurance requires proving damage to insured property, but Snowfall Contracts payout automatically based on the measured Snowfall amount.
Are contracts regulated?	Yes. Purchasing Snowfall Contracts at TradeWeather.com results in trade positions at CX Futures Exchange, L.P., a Designated Contract Market regulated by the U.S. Commodity Futures Trading Commission ("CFTC"). And your funds are always protected on deposit at CX Clearinghouse, L.P., a US Derivatives Clearing Organization also regulated by the CFTC.
What exactly is a "contract"?	Each Snowfall Contract you purchase entitles you to a share of the total Risk Pool. If your trade correctly predicts the Snowfall amount then you will receive one whole "share" in the pool, otherwise you'll receive 1/100 th of a share in the pool.
Snowfall Strikes	Snowfall is measured in inches of precipitation, to the precision of tenths of an inch. If you believe that there will be no Snow at all, select the 0.0 " strike. If you believe that there will be Snow at the location, select the appropriate strike representing the likely Snowfall amount. Note: the payout is highest for the strike that is closest to, but does not exceed, the Snowfall measurement.
What does the contract cost?	Contracts may be bought at all locations for \$1.00 each, excluding fees, prior to Dec 1 st . Prices go up by \$0.25 per contract approximately every 10 days after to a maximum of \$2.50 per contract between Jan 21 st – 31 st . Contracts cannot be purchased for the current season past Jan 31 st . For details on price changes check the SASI contract rules.
What is the Pool size?	The Pool size equals all the premiums paid by contract buyers and is fully distributed back to the contract holders. CX Futures Exchange does not take any fees from the pool.
How are the Pool and payout determined?	All contracts receive a payout from the Pool. Contracts for the strike level that corresponds to the actual Snowfall amount receive one whole share of the total pool, contracts for strike levels that correspond to lower Snowfall amounts receive a lesser share of the pool, and contracts for strike levels that correspond to higher Snowfall amounts receive 1/100 th of a share. Payout amount equals the Pool divided by total shares.
How is the Snowfall amount determined?	CX relies primarily on data published by the National Weather Service ("NWS") in its Preliminary Climate Report ("CLI"). CX may use other data sources as necessary to supplement or confirm data appearing in the CLI.
What if there is no Snow?	If there is no Snow, contracts in the 0.0" strike level will receive one whole "share" in the pool, while contracts in all other strike levels will receive 1/100 th of a share in the pool.
Can you sell your contracts?	No. Once purchased, contracts will settle at 12pm (noon) ET on the Final Settlement Date – May 31 st of the settlement year.
Can you change the selected strike?	Yes. If you think you need to change your strike level, you may switch to another level. However, this may involve a higher purchase price and there are some restrictions on switches. Please contact us for more information.
What else do I need to know?	CX has provided a "Quick Start Guide" for Seasonal Snowfall, which you can find along with more information and additional resources at TradeWeather.com/education . Also, you may contact the exchange at any time for assistance.
